Using Thunderbird to Read and Post to Usenet

This short tutorial is meant to help users get connected to Usenet using a Newsreader.

There are many newsreaders available, but learning how to set up using one will help you understand what's going on, and you should be able to move to other Newsreaders as you wish in the future. Thunderbird was chosen due to it's availability and popularity. It is not, in my opinion, the best choice, but it will get the job done.

I will leave it to you to get Thunderbird installed, but here is a link for Windows users: <u>https://support.mozilla.org/en-US/kb/installing-</u> <u>thunderbird-windows</u>

Linux users will most likely be able to install from their package manager, and I'm sure Mac users can figure it out :)

Once installed, run it and find the menu selection 'Account Settings' and click it. Then you should see a window similar to the image below. You probably don't need to change anything on this screen:

✓ ☐ Local Folders	Account Settings					
Junk Settings						
Disk Space Gutgoing Server (SMTP)	The following is a special account. There are no identities associated with it.					
Eg Outgoing server (SMTP)	Account Name: Local Folders					
	Message Storage					
	Empty Trash on E <u>x</u> it					
	Message Store <u>Type</u> : File per folder (mbox) \checkmark					
	Message store Type. The perioder (mbox)					
	Local Directory: /home/paris/.thunderbird/ytpgp8mg.default-default/Mail/Local Folders <u>B</u> rowse					
Account Actions ~						
Account Actions V						
Account Actions ~						
_						

Now, click on 'Account Actions' (lower left) and select 'Add Newsgroup Account'. This should bring you to the 'Account Wizard':

On this screen (above), you will want to fill out how you want your name displayed in posts, and to enter your email address. Once that is done, click 'Next' to proceed to the following screen:

Here you will enter the news server domain name to connect. This will be available from your Usenet provider. Some examples are 'news.i2pn2.org' or 'news.eternal-september.org'. Enter the appropriate server name and click 'Next':

es with ble law

olidbbs.c			Ask <u>me</u> before downloading more than 500 \bigcirc messages				
			Always request authentication when connecting to this server				
			Message Storage				
			Message Store <u>Iype</u> : File per folder (mbox) ~				
			News.rc File: /home/paris/.thunderbird/ytpgp8mg.default-default/News/newsrc-news.i2pn2 Brow				
			Local Directory: /home/paris/.thunderbird/ytpgp8mg.default-default/News/news.i2pn2.org				
		<u>A</u> ccount Actions ∨	Default Text Encoding: Unicode (UTF-8) 🗸				
		鏱 Thunderbird Settings					
		සිං Add-ons and Themes					
	鏱						

On the screen above, you can change some settings for security, etc. You probably want to click 'Connection Security', and change to 'SSL/TLS', which should automatically change 'Port' to 563.

Then click 'Always request authentication when connecting to this server'. This is not always required, but for some servers, such as 'news.eternalseptember.org', this is critical to be able to access all the groups. It's fine to click it for any Usenet server:

es with								
ble lav 😰	∨ ⊕ i2pn2 News Server	Server Settings						
5 06:5 💬	Server Settings							
ser cd	Copies & Folders Composition & Addressing Synchronization & Storage	Server Type: News Server (NNTP)						
r hobbe		Server Name: news.i2pn2.org						
obbes/ s\$ wge1	Local Folders							
3 h1 u.edu (Junk Settings Disk Space	Security Settings						
.nmsu.€	Outgoing Server (SMTP)							
waiting (18G) [Connection sec <u>u</u> rity: SSL/TLS \vee						
tp_11Ja		Common Contrinues						
.tar		Server Settings						
(2.44)		<u>C</u> heck for new messages at startup						
s\$ []		Check for new messages every 10 💭 minutes						
olidbbs.c		Ask <u>m</u> e before downloading more than 500 — messages						
		✓ Al <u>w</u> ays request authentication when connecting to this server						
		Message Storage						
		Message Store <u>Type</u> : File per folder (mbox) \vee						
		News.rc File: /home/paris/.thunderbird/ytpgp8mg.default-default/News/newsrc-news.i2pn2 Brow						
		Local Directory: /home/paris/.thunderbird/ytpgp8mg.default-default/News/news.i2pn2.org						
	Account Actions V							
		Default Text Encoding: Unicode (UTF-8) Y						
	錞 Thunderbird Settings							
6	錄 Add-ons and Themes							

Now click on the 'Local Folders' tab, and you should see something like:

Right click on your news server name (here it's 'i2pn2 News Server') and click 'Subscribe'. This should bring you to:

os with		+ New Message	0 *	Subscribe	~ ^ X

Here you can now see all the available groups, and you may subscribe to whatever you wish.

HINT: If you do not see many (or any) groups, click 'Refresh'. If you still do not, check your authentication (username/password), and that you have checked 'Always request authentication' in a previous step.

Once you can see groups, click the box to the right of each newsgroup that you wish to subscribe to:

Then click 'OK':

Now you should see those groups listed below the server name (upper left of window).

Then, double click on a group name to show the articles:

To Reply to an article, click 'Followup'. (Clicking Reply may try to send

email to the user instead, but 'Followup' will send your post to the group:

To create a new thread, click 'New Message':

This brief tutorial is meant to hopefully get you started using Usenet the way it was meant to be used.

If you have questions or need help, just ask in a group such as 'news.software.readers' or contact your Usenet provider.
